

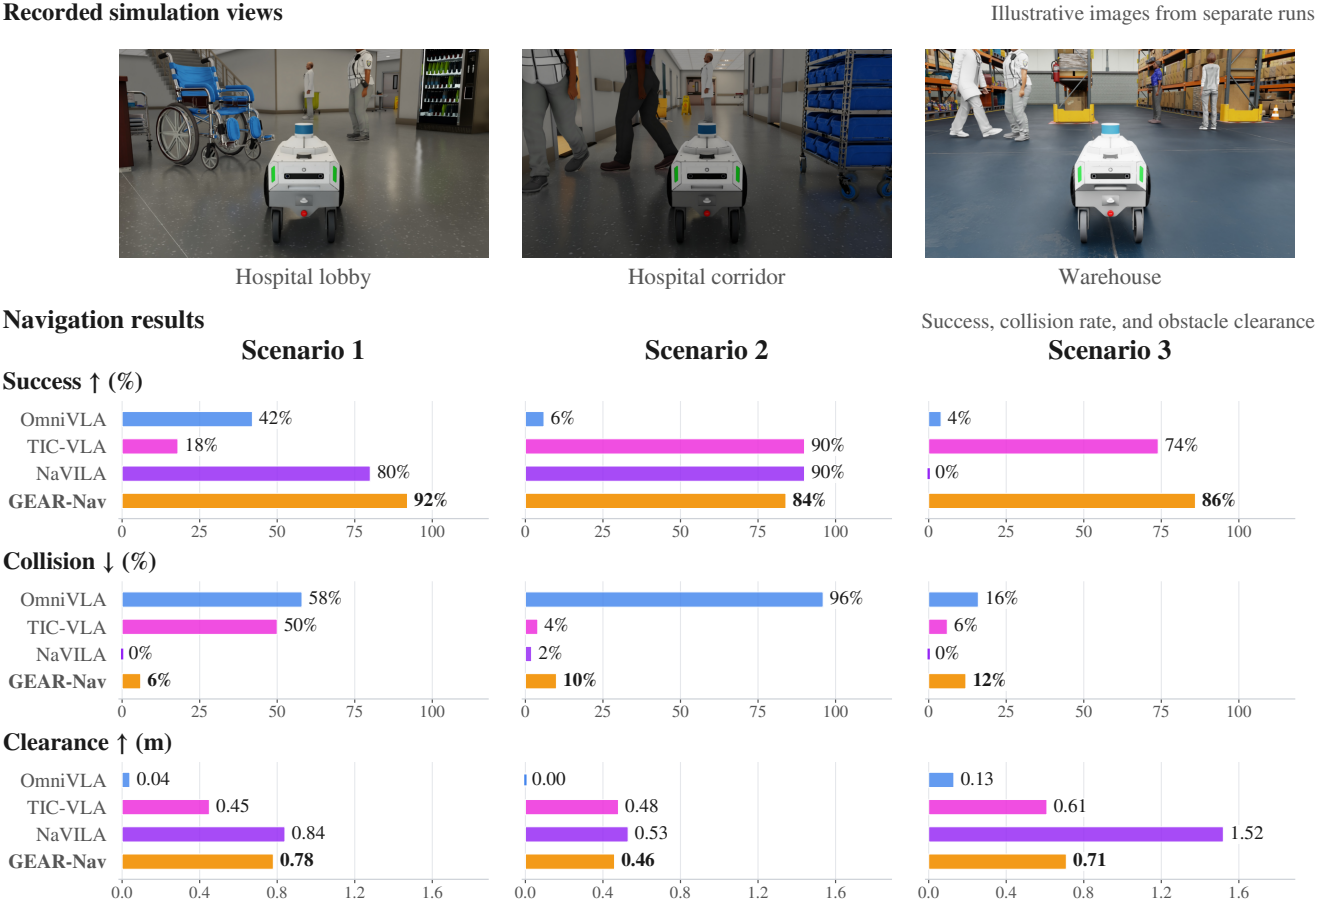

Figure. Isaac Sim navigation evaluation. Success rate, collision rate, and obstacle clearance are shown for GEAR-Nav, OmniVLA, TIC-VLA, and NaVILA across three scenarios. Higher success and clearance and lower collision rate are preferred. GEAR-Nav is highlighted in orange, with the same method colors used in the real-world figure. Baselines are reproduced from VEGA; GEAR-Nav values follow the updated simulation table. Rates are displayed as percentages and clearance in meters. The upper images are illustrative third-person views from separate recorded runs; they are not matched to the aggregate results below. Bars show the supplied aggregate values, without inferred trial counts or uncertainty estimates.
